

Research Examples with LLM Agents

Some inspiration from our research

Sascha Kaltenpoth

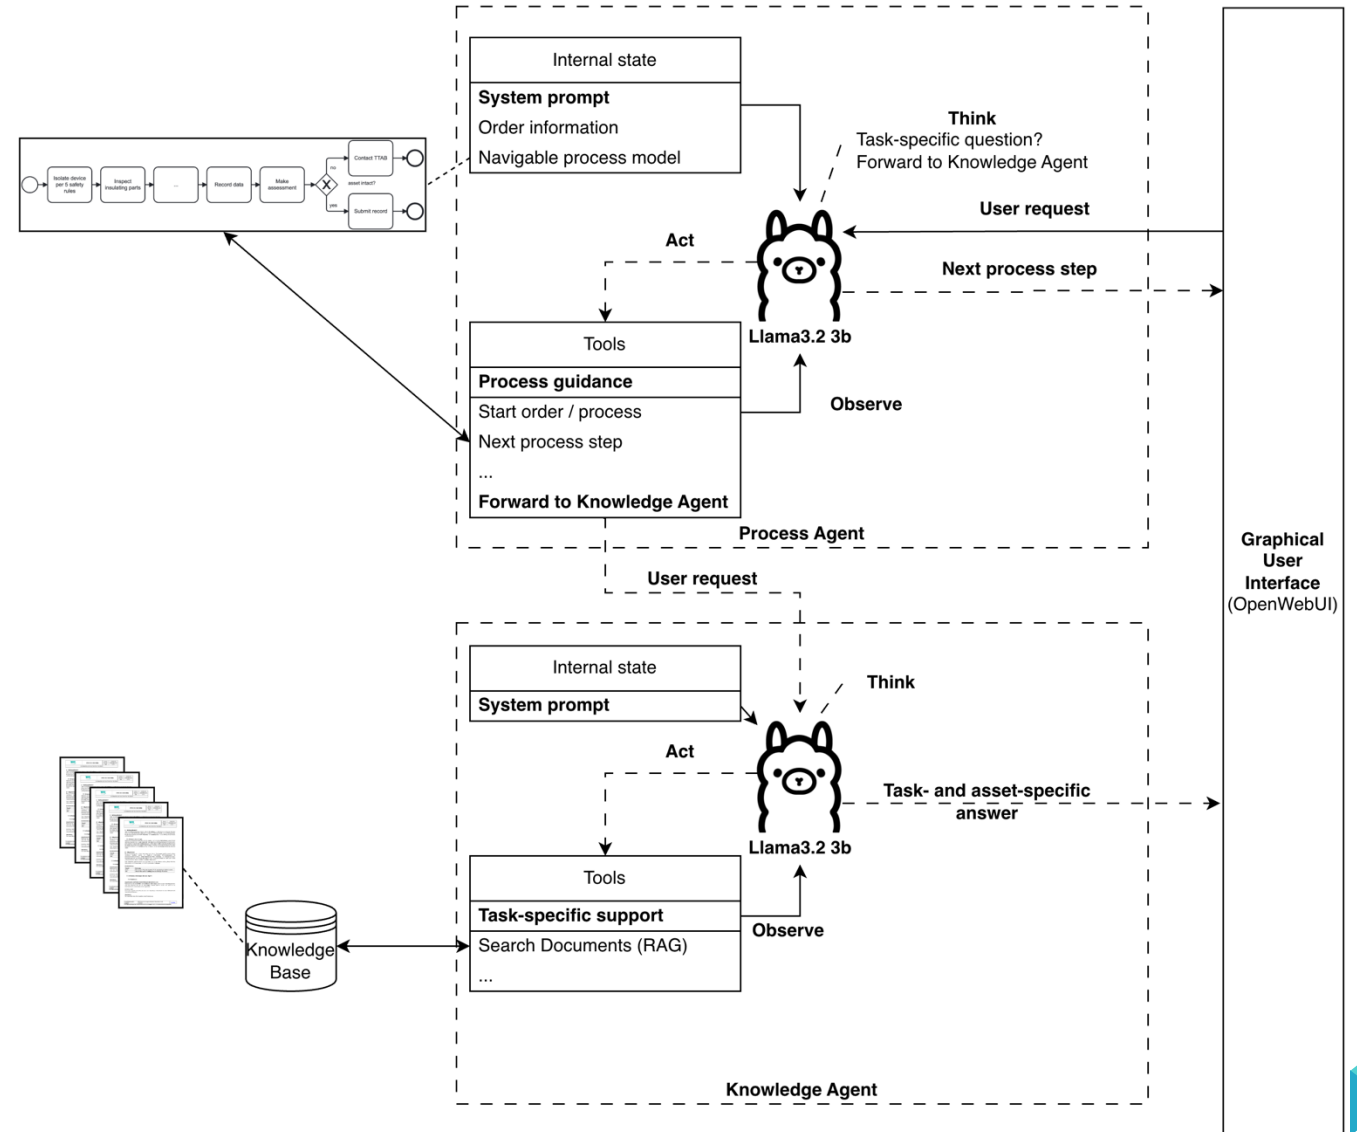

AProSys

AI-supported assistance and forecasting
systems for sustainable use in intelligent
distribution network technology

What did we do? (forthcoming, research preview)

We implemented (forthcoming):

- A multi-agent system
- Based on tool calling
- One agent guides through a predefined process
- The other answers questions

A Step Towards Cognitive Automation: Integrating LLM Agents with Process Rules

What did we do? (Kaltenpoth et al., 2025)

1. Process rules

We implemented:

- A an LLM agent
- That automates processes using process rules → structured descriptions of the process that were generated from BPMN files or natural language
- Increases automation accuracy of the LLM agent from 85% to 99%

2. LLM agent
